

BUSINESS-ORIENTED API	AUTOMATIC LAYOUTING	DocumentFlowArea	
The developers can focus their efforts on creating documents that solve business needs as opposed to working out the nuances of creating files in a PDF format.	The library supports automatic content layout page by page using layout templates, automatic pagination, automatic Table of Content creation, and support of repeating elements like footers and headers.	What differs GS PDFFlow Library from any other PDF generation library out there?	
SIMPLIFY DEVELOPMENT PROCESS	FORMATTING		
The developers can think about documents in terms of paragraphs, tables, and images. Our library will take care of presenting the documents in a PDF format.	The library has rich formatting capabilities, including book spread tables.	Any library that is available on the market right now would be a direct competitor to Haru we base GS PDFFlow Library on. Don't think of GS PDFFlow as a library to just create a document. It is rather a page making API that you can use in your application. We provide a big chunk of functionality that you would expect in applications like Adobe InDesign minus the user interface. This approach takes a load off of developer's shoulders allowing them to concentrate solely on the business needs. It improves code readability and supportability, decreases the chances of defects or other mistakes, saves time and money – all when working with PDF documents.	
<div> <div> <div>1. Our Net standard 2.0 package allows deployment on Windows, Linux and OSX as a part of a local or a server-side application.</div> <div>2. The library supports content in any language, including RTL languages.</div> <div>3. We offer the library that has unique functionality for a fair and reasonable price. Pay only when you get to production.</div> <div>4. The library has rich formatting capabilities, including book spread tables.</div> </div> <div> <div>• API DOCUMENTATION</div> <div>• FREE DEMO</div> </div> </div>		<div> <div>This sounds complicated. Do I really need GS PDFFlow Library if I only need to create printable version of an invoice in my application?</div> <div>GS PDFFlow Library is not a complicated tool. It is versatile, but removes a lot of costs that are normally associated with PDF development. For example, since the library takes care of the content layout, TOC, pagination, even book spread tables, you do not need deep and thorough knowledge of PDF technology. This reduces the learning curve as you are working with objects (for example, tables or images) that are easy to understand. Additionally, since the use of the library reduces the amount of code and potential errors, in the long run it is efficient even for small tasks.</div> <div>Can I read and/or change an existing PDF document?</div> <div>No, we do not provide functionality to work with existing PDF. The sole purpose of GS PDFFlow Library is to offer an easy way to create simple and complex PDF documents when you need to provide a printable version for your needs or the needs of your end-users.</div> </div>	
			Many developers have the same need: a tool to create documents for printing or sending to their users in a PDF format.The solutions currently available on the market have one common drawback – they provide only a low - level functionality to create PDF documents.

1. Our Net standard 2.0 package allows deployment on Windows, Linux and OSX as a part of a local or a server-side application.
 2. The library supports content in any language, including RTL languages.
 3. We offer the library that has unique functionality for a fair and reasonable price. Pay only when you get to production.
 4. The library has rich formatting capabilities, including book spread tables.
